Experience

Multiplica Talent / Pandero

Lead Frontend / Design System Engineer– (Lit.dev)

Lima - Remote
October 2025 – March 2026

- Designed a scalable Design System based on Web Components using Lit.dev, following Atomic Design principles.
- Architected and maintained a reusable component library, defining development standards, naming conventions, and monorepo structure.
- Developed core components, a theming system using CSS Variables, and shared utilities for the team.
- Optimized component performance and bundle size.
- Implemented and maintained Storybook as documentation, including comprehensive stories, variants, visual testing and regression testing.
- Developed framework-agnostic components, enabling adoption across different projects and teams.
- Provided technical leadership through mentoring, code reviews, and solving advanced challenges related to Web Components.
- Creation of detailed operational guides with audiovisual support for **WordPress/Gutenberg** block management, ensuring the editorial team can create, edit, and maintain pages autonomously and efficiently

Upwards Studio

Co-Founder and Product Lead

Lima - Remote
July 2024 – January 2026

- Led the definition and execution of digital products, from ideation to launch, aligning client needs with business objectives.
- Conducted meetings with prospects and clients to gather requirements and design custom solutions (websites, eCommerce platforms, applications, and custom systems).
- Prepared functional and technical proposals, defining project scope, user flows, and key components.
- Organized and managed the team's workflow in Jira, assigning tasks, setting priorities, and tracking deliverables.
- Collaborated closely with the development team on the technical implementation of CMS-based solutions (such as WordPress and Shopify) and custom software (React js, Vue js, Angular, React Native), ensuring quality and consistency.
- Implemented automation and agile methodologies to optimize processes, reducing delivery times and improving team efficiency.
- Oversaw quality assurance (QA) processes prior to launches, ensuring compliance with standards and client satisfaction.

Luis Meléndez Rodríguez

Factoring Prestamype Frontend Developer – Vue js

Lima - Remote
September 2022 – July 2025

- Collaborative work with the design team to translate UX/UI designs into interactive and responsive user interfaces.
- Layout of the different components required for a web application using Vue.js and Nuxt.js,
- I led the Frontend team, managing tasks, reviewing Pull Requests (PRs), and conducting code reviews to ensure best development practices.
- Use APIs to connect the web with services and systems.
- Participation in the integration of third-party APIs and content management systems (CMS).
- Developed and maintained websites using HubSpot CMS
- Created custom modules and managed themes/templates using HubL
- Integrated third-party REST APIs and handled JSON data
- Integrating forms on the website with HubSpot for improved customer tracking.
- I participated in microfrontend projects using module federation with Webpack, enabling the integration of applications built with Vue 2 and Vue 3 within a single platform.
- Implementation of unit tests and conduct user testing to ensure code quality and the end-user experience.
- I collaborated on backend projects based on Node.js, using the NestJS framework, participating in the integration between frontend and backend and in the design of REST API contracts.

Divelia Studio S.A.C. Frontend and CMS Developer

Lima, Remote
May 2021 – January 2022

- Creation and maintenance of websites using HTML, CSS, and JavaScript with React js
- I participated in troubleshooting and correcting user interface errors.
- I participated in projects developed with React.js and in the integration of enterprise portals using Liferay, adapting components and customizing views according to client requirements.
- I gained experience in implementing accessibility and SEO improvements.
- Custom web design using a Content Management System such as WordPress.
- Development and customization of templates: Setting up and customizing a specific CMS, such as WordPress or Prestashop, to meet the project's requirements.
- Enhancing the speed and performance of the website by optimizing databases, compressing images, and implementing caching techniques.
- Updating CMS components, applying security patches, and regular maintenance to ensure optimal performance.

Luis Meléndez Rodríguez
